36.1
CRITICAL

Date Generated: Q1 2024

Powered by Sentinel-2 · ESA Copernicus

Risk Assessment Breakdown

Deforestation Risk: 55.3/100

Moderate vegetation loss detected; monitoring recommended.

Water Stress: 68.8/100

Critical water scarcity; supply chain risk identified.

Environmental Pollution Proxy: 87.8/100

Severe environmental degradation; urgent action required.

Methodology & Data Source

Satellite Data

Sentinel-2 L2A multispectral imagery, Q1 2024. Data processed at 100m resolution with NDVI (Normalized Difference Vegetation Index) and NDWI (Normalized Difference Water Index) computations.

Scoring Formula

$$\text{EcoScore} = 100 - (0.40 \times \text{Deforestation} + 0.35 \times \text{Water Stress} + 0.25 \times \text{Pollution})$$

Compliance Status

COMPLIANT (≥ 70): Meets sustainability requirements

REVIEW (40–69): Improvement recommended

CRITICAL (< 40): Immediate intervention required

Disclaimer

This assessment covers environmental dimensions only. Does not cover labour practices, governance, or financial sustainability. For CSRD reporting, align with ESRS E2 (Pollution), E3 (Water & Marine Resources), and E4 (Biodiversity & Ecosystems).
